

Hi Kevin,

Doing some updating for our website and I wanted to share these two very important sites.

You may have heard of Earthworks. They have a dedicated section on best practices for unconventional gas drilling.

https://www.earthworksaction.org/issues/detail/best_practices_overview#.WBT7a2ViSQc

Earthworks also reference the EPA Gas Star Program which includes voluntary and regulatory best practices.

<https://www.epa.gov/natural-gas-star-program>

In addition, Earthworks has information regarding the NASA data on methane leaks.

https://www.earthworksaction.org/media/detail/camera_exposes_methane_leaks_noted_by_nasa#.WBUAAbWViSQd

I also wanted to make sure you had the most recently published information regarding public health effects. As an advocate for my children, these new research studies are crucial in our discussion to limit unconventional gas drilling near children.

<http://publichealth.yale.edu/news/article.aspx?id=13714>

In Pennsylvania, our Medical Society House of Delegates, made up of 300 physicians, has recommended a moratorium on fracking in PA. Because of the growing research showing negative health effects, they are recommending a health registry and more research to protect the public.

<http://www.post-gazette.com/local/region/2016/10/27/Doctors-group-calls-for-moratorium-on-fracking-in-Pennsylvania/stories/201610270226>

I look forward to speaking with about your thoughts on these issues. We are preparing for departure on the 5th, and I am looking forward to bringing the most relevant information to your group on the 8th.

Best Regards,

Amy
